
STALLION AFFINITY REPORT

KANEKO

Thoroughbred · Foaling Year: 2001 · PIVOTAL × KALIMAT

Report No	UAT-20260808-16963
GHN ID	TRIE001-HX8V
Date	08.08.2026
Prepared by	UAT Racing
Scope	1990-2026 TJK archive · 1.4M race records

This report presents statistical analysis; final breeding decisions should involve veterinary examination and field assessment.

Sources: UAT Stud Book (61 ancestors) · International Register (1) · GHN Universe (0) · Name only (0). A GHN match is accepted only when breed, sex and foaling-year constraints leave a single candidate; ambiguous matches are not linked.

The black type mark is based on TJK group race records (1990–2026). Group races won under foreign registries fall outside its scope — an unmarked ancestor is not necessarily without black type.

Inbreeding (ancestors duplicated within 5 generations)

NORTHERN DANCER: 4S × 3D · **NEARCTIC:** 5S × 4D · **NATALMA:** 5S × 4D · **TUDOR MINSTREL:** 4D × 5D

Yellow fill = ancestor appearing more than once within 5 generations. **Dark red bold** = group race winner (black type). Cell: name · foaling year · colour. Notation: 4S × 5D = 4th generation on the sire side, 5th on the dam side.

3. PROGENY STATISTICS

Total Foals	Starters	Winners	Winners / Starters	Black Type Winners	BT Winner Rate
655	647	437	67.5 %	20	3.1%

Progeny Earnings	504.183.015 TL	Black Type Performers	52
AEI	1.34	CI	1.14
AEI – CI	+0.20		

AEI (Average Earnings Index) is progeny earnings against the breed average; 1.00 = average. CI (Comparable Index) is the earnings of foals produced by the **same mares with other stallions** — it measures mare quality. **AEI > CI means the stallion improves the mares sent to him**; it is the single most trusted indicator in the industry.

4. BROODMARE SIRE AFFINITY

This table shows which **broodmare sires** this stallion crosses best with. Earnings Index = earnings per starter of that cross ÷ the stallion's overall earnings per starter. **1.00 = the stallion's own average**. The BT column counts group-race winners/placed progeny — it is evidence, not a grade driver.

$A++ \geq 2.50 \cdot A+ \geq 1.80 \cdot A \geq 1.40 \cdot B \geq 1.00 \cdot C \geq 0.60 \cdot D < 0.60$. No letter grade is given below 5 starters
 — a high rate from a tiny sample is noise, not information.

7. METHODOLOGY

Data source. Official TJK race archive 1990–2026; 1.4 million race records. Progeny statistics are computed from every registered foal of the stallion.

Black type definition. Wins and placings in group (named) races. Group 1 / 2 / 3 follows the TJK condition class. 951 Group 1, 1,209 Group 2 and 2,403 Group 3 races between 1990 and 2026 were included. **Note:** condition-class statistics sometimes labelled “group” are not black type and are not used in this report.

Earnings index. For each broodmare sire, earnings per starter are divided by the stallion’s overall earnings per starter. The TrueNicks SII × BSII approach was built for markets with dense black type; group races are rare in Turkey (20 of 477 starters for this stallion), so a black-type-based index collapses most crosses to zero and discriminates nothing. An earnings base asks the same question with dense data. Crosses with fewer than 5 starters receive no letter grade.

Limits. Statistics do not replace physical inspection or veterinary examination. Crosses with few foals remain exposed to chance.
