Catalogue	satilikyarisati.com — İngiliz Tay Satış Kataloğu
Lots	7
Date	09.08.2026
Prepared by	UAT Racing
Scope	1990–2026 TJK archive · 1.4M race records

This report presents the data the catalogue omits; the final purchase decision requires veterinary examination and physical inspection.

WHY THIS REPORT EXISTS

A sales catalogue page is **advertising**. The international standard (Fasig-Tipton, Keeneland, Tattersalls) lists only black type relatives on the lot page: unraced siblings, non-winning produce and the history of the cross **do not appear**. This is not deception but an accepted presentation convention — yet it systematically flatters the picture the buyer sees.

This report reads the same lots against the entire TJK archive: how many foals the sire actually started, how many won, where he sits against the breed average; what the dam's previous foals did; whether this sire × broodmare sire cross has been tried in Turkey and what came of it. **Where there is no data we write “no data”** — we do not grade small samples.

HOW TO READ THIS REPORT

Black type convention (ICSC 2025). Group race winners appear in **BOLD CAPITALS**, group race placed horses in **Bold Upper and Lower Case**, and horses without black type in plain type. This report uses the same convention as international catalogues, so a name's typography alone tells you its black type status.

AEI and CI. AEI is progeny earnings against the breed average (1.00 = average). CI is the earnings of foals produced by the **same mares with other stallions** — it measures mare quality. **AEI > CI means the stallion improves the mares sent to him.**

Cross index. The inflation-adjusted earnings index of foals from this sire × broodmare sire cross, divided by the sire's own overall average. 1.00 = the sire's own average. **No grade is given below 5 starters** — a high rate from three foals is noise, not information.

Evidence Strength. This states how much data supports the lot, not that the foal is good. A lot with low evidence strength may be poor or excellent — the archive simply does not know.

The sire

The listing records this sire as UAT #47548, a row with no progeny. Row **UAT #24066**, carrying the same name and the same sire line, holds 69 foals and the statistics are read from there. This merge stems from a duplicate record and is disclosed rather than hidden.

The dam

GÜÇLÜ KIZ, foaled 2015, by BOSPORUS out of BERSUDE. Her own record: 67 starts, 11 wins, 9 seconds, 12 thirds, 8 fourths; total earnings 699,950 TL.

This horse's identity can be verified at uatracing.com/ghn/TRIK015-D8U4.

Produce record

According to the archive this is the dam's **first foal**. First foals are statistically neither advantaged nor disadvantaged — there is simply no produce history, so the decision must rest on the dam's pedigree and the foal's physique.

This cross

The EPAULETTE × BOSPORUS cross

This sire × broodmare sire cross has **not been tried before** in the TJK archive. This does not indicate a poor cross; it indicates there is no local evidence about it.

Assessment

Evidence Strength: **MEDIUM**

Strengths

- AEI 1.15 / CI 0.92 — the stallion improves the mares sent to him.
- Progeny earnings run **15% above** the breed average (AEI 1.15).
- The dam raced: 67 starts, 11 wins, 699,950 TL.

Points to check

- The sire offers a proven base of 65 starters but the **win rate is 37%** — most of his progeny do not win (1 black type performers).
- This sire × broodmare sire cross is being tried in Turkey for the **first time**.
- The dam has no previous foals in the archive — this is her first.

Evidence Strength states how much archive data exists about this lot; it does **not** grade the foal's quality.

The sire

No starters are recorded for **PROFITABLE** in the TJK archive. This does not mean the stallion is weak — it means he has not yet been measured in Turkey. Local progeny data cannot exist until his first crop runs; the assessment must rest on pedigree and the dam side.

This horse's identity can be verified at uatracing.com/ghn/TRIE012-ZFXR.

The dam

The sire

The listing records this sire as UAT #47620, a row with no progeny. Row **UAT #29336**, carrying the same name and the same GHN identity, holds 55 foals and the statistics are read from there. This merge stems from a duplicate record and is disclosed rather than hidden.

Foals	Starters	Winners	Winners / Starters	Black Type	Progeny Earnings

Green row = full sibling to this lot (same sire, same dam). Bold capitals = group race winner; bold upper-and-lower = group race placed.

This cross

The KLUGER × BARATHEA cross

This sire × broodmare sire cross has **not been tried before** in the TJK archive. This does not indicate a poor cross; it indicates there is no local evidence about it.

Assessment

Evidence Strength: **MEDIUM**

Strengths

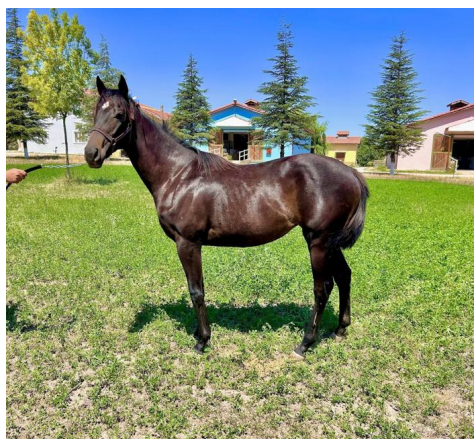

- AEI 0.91 / CI 0.86 — the stallion improves the mares sent to him.
- The dam has 7 foals in the archive; 7 started and 4 won.
- The dam has produced **black type** (1).
- Best produce **OPSTINATE** (2010, 44 starts 12 wins, 1,012,680 TL).

Points to check

- The sire offers a proven base of 53 starters but the **win rate is 43%** — most of his progeny do not win (1 black type performers).
- This sire × broodmare sire cross is being tried in Turkey for the **first time**.
- No race record for the dam in the archive (she may be unraced or have raced abroad).

Evidence Strength states how much archive data exists about this lot; it does **not** grade the foal's quality.

The sire

No starters are recorded for **AEGEAN FINALE** in the TJK archive. This does not mean the stallion is weak — it means he has not yet been measured in Turkey. Local progeny data cannot exist until his first crop runs; the assessment must rest on pedigree and the dam side.

This horse's identity can be verified at uatracing.com/ghn/TRIE019-U9L6.

The dam

FLYING SEA, foaled 2016, by NATIVE KHAN out of SONSUZ ALEV. Her own record: 8 starts, 0 wins, 0 seconds, 0 thirds, 0 fourths; total earnings 0 TL. Produce record: **1 foals**, 1 have started and 0 have won; total progeny earnings 0 TL.

This horse's identity can be verified at uatracing.com/ghn/TRIK016-BESF.

METHODOLOGY AND LIMITS

Data source. Official TJK race archive 1990–2026; 1.4 million race records, 65,858 horses, the UAT Stud Book and the GHN universe. Lot details come from the catalogue published by the vendor; pedigree and progeny data are recomputed from the archive.

Black type definition. Wins and placings in group (named) races. Group 1/2/3 follows the TJK condition class. **Note:** condition-class counters sometimes labelled “group” are not black type and are not used here.

Inflation adjustment. Earnings are nominal Turkish lira and are not comparable across 1990–2026. Every horse is divided by the mean earnings of its own **foaling year + breed** cohort; 1.00 = that cohort’s average. Comparing raw lira would measure the year of birth, not the cross.

Record matching. The same horse may appear in more than one archive row. Sire identity is reduced to a single row using name matching plus GHN identity or sire-line verification from the catalogue note; where a merge was applied it is stated on the lot page. For mares the dam line given in the listing (broodmare sire – second dam) is used as the verification key, which is what separates mares sharing a name.

When no grade is given. Crosses with fewer than 5 starters receive no letter grade. Competing products grade small samples; we do not, because a 100% rate from three foals is noise, not information.

Limits. Statistics do not replace physical inspection. This report says nothing about conformation, limbs, wind, radiographs or temperament — a pre-sale veterinary examination does not replace this report, and this report does not replace it. Newly imported stallions have no local progeny; that is an absence of data, not a judgement of performance.
